

Stowasis Sheer Descent Water Blades create an impressive falling sheet of water. They should be positioned on a wall with water flowing over the edge of the blade emerging as a sheet of falling water.

These high quality blades are made from brushed stainless steel and consist of a box shaped chamber that is 90mm by 70mm. The front of the chamber has a lip, which is 50mm deep, with an opening above it. The chamber fills up through a system of baffles and then flows over the edge of the lip.

Sheer Descent blades are available in five widths. The narrowest features have only one water inlet where as the widest have three that are evenly spaced along the length of the chamber.

Sheer descent – Stunning Water Blades					
Code	Width (mm)	Water Entry Point	Recommended Pump at 1.2m (lph)	Pump Product Code	Complete Pipe and Fitting Kit
